LinkedIn | GitHub | Portfolio | Networking Labs

PROFESSIONAL SUMMARY

BS Computer Science student (graduating December 2026) aiming for a network engineer role. Completed 25+ Cisco Packet Tracer labs and assignments covering IP addressing, subnetting, static routing, RIP v2, EIGRP, OSPF, route redistribution, DHCP, NAT, ACLs and port security. Holds a NAVTTC Cyber Security (CEH) certificate and is preparing for CCNA through self-study. Also has web development experience through a MERN-stack final year project and a frontend internship, and prepares reports and presentations in MS Office.

EDUCATION

BS Computer Science 2023 – December 2026 (expected)

Karachi Institute of Economics and Technology (KIET), College of Computing and Information Sciences

- **Relevant coursework:** Data Communication Networks, Internet/Intranet Architecture, Final Year Project

Intermediate 2022

Matriculation 2020

TECHNICAL SKILLS

Routing: Static and default routing, RIP v2, EIGRP, OSPF, route redistribution

Services & security: DHCP and DHCP relay, NAT, standard and extended ACLs, switch port security, wireless (WPA), FTP, DNS, HTTP, email (SMTP/POP3), Telnet, cyber security fundamentals (CEH course)

Fundamentals: IPv4 addressing, FLSM and VLSM subnetting, Ethernet cabling, Cisco IOS CLI, Cisco Packet Tracer

Learning (CCNA): VLANs, trunking, STP, IPv6

Programming: C#, ASP.NET, Python, JavaScript, HTML and CSS

Web development (MERN): React.js, Node.js, Express.js, MongoDB, REST APIs, Socket.io, JWT

Tools & Office: Git and GitHub, VS Code, Figma (basics), MS Office (Word, PowerPoint, Excel)

NETWORKING LABS (UNIVERSITY COURSEWORK)

Data Communication Networks and Internet/Intranet Architecture, in Cisco Packet Tracer. Reports and files: github.com/Hammadullah323/networking-labs

- Built multi-router topologies of up to 10 routers and 22 PCs running DHCP, FTP, DNS, web and email services.
- Configured static, RIP v2, EIGRP and OSPF routing and verified it with `show ip route`, ping and tracert. Joined all four methods on a core router with route redistribution.
- Implemented DHCP (including a central server with DHCP relay), dynamic NAT, extended ACLs (allowing only FTP to a server) and switch port security with sticky MAC addresses.
- Designed FLSM and VLSM addressing plans for multi-branch networks, with the subnet calculations done by hand.
- Set up Telnet remote access, FTP, DNS, web and email (SMTP/POP3) servers across routed networks, and troubleshot cabling and addressing faults.
- Prepared the lab reports with topologies, configurations and test screenshots in MS Word.

CERTIFICATIONS & COURSES

Cyber Security (CEH) 12 Feb – 20 May 2026

NAVTTC, Prime Minister's Youth Skills Development Program (Batch III), at KIET Shahrah-e-Faisal | Grade A+

Full Stack Web Development with MERN Digiskills

Course source code and assignments: github.com/Hammadullah323/Digiskills-Full-Stack-Development-With-MERN-Course

FINAL YEAR PROJECT

Travel Buddy: Smart Travel Companion & Expense Management Platform Fall 2025 – 2026

Team of 4 | MERN stack | FYP 1 completed, FYP 2 in progress | Source code private

- Rule-based partner matching engine that scores destination (high), date overlap (medium) and budget/interests (low) into a 0 to 100% compatibility score.
- Real-time 1-to-1 and trip group chat with Socket.io; trip creation, invites and profile preferences.
- Email OTP signup (Brevo API), JWT-protected routes and hashed passwords; safety features with ratings, reviews, block/report and emergency contacts.
- Travel document vault and pre-trip checklist, with Node-Cron email reminders until required documents are uploaded.
- **In progress (FYP 2):** expense splitter with debt simplification, transport booking with a seat map, hotel and restaurant integration, and hotel and car-rental owner portals.

Tech: React.js, Node.js, Express.js, MongoDB, Mongoose, Socket.io, JWT, bcrypt, Brevo API, Node-Cron

INTERNSHIP

Frontend Developer Intern | Developershub Corporation

- Converted professional Figma designs into pixel-perfect, responsive e-commerce pages using HTML5, CSS3 (Flexbox, Grid, media queries) and JavaScript.
- Built the header and footer, hero section, deals section with countdown timer, product list, product detail and cart pages.
- Added interactivity with JavaScript (search alerts, size selection, DOM manipulation) and managed the project with Git and GitHub (code).

OTHER PROJECTS

- **Turkey Earthquake 2023 Website:** multi-page site with Home, About, Videos, Donations and Contact pages in HTML, CSS and JavaScript (university project, code).
- **Python Practice:** exercises and beginner-level small projects from the Awfera course (code).
- **Portfolio website:** React and Tailwind CSS site on GitHub Pages (hammadullah323.github.io/my-portfolio).

COMMUNITY

- **Hammad Tech Solutions:** runs a Facebook and Instagram learning page that shares CCNA practice MCQs and networking content (Facebook, Instagram).
